

SPECIFICATION AMENDMENTS

Please replace the paragraph beginning at page 11, line 8 with the following paragraph:

The elastic body seal 60 is constituted by an annular portion in an outer peripheral side of one plate surface 50a of the spring receiver 50, and a rubber body which is integrally formed around an outer peripheral portion 50b of the spring receiver 50 in accordance with a baking adhesion or the like so as to be borne. In this case, the elastic body seal 60 may be an independent body from the spring receiver 50. The elastic body seal 60 is provided with an inner peripheral wall 61 fitted to the outer periphery of the small diameter portion 26 when one plate surface of the spring receiver 50 is brought into contact with an end surface of the small diameter portion 26 of the ball receiver 24 so as to align in an axial direction. A seal lip 62 is expanded from a base portion of the inner peripheral wall 61 toward an outer side via an annular space.
